```java
public class Triangle {

    double base;
    double height;

    double getArea() {

        return 0.5 * this.base * this.height;
    }

    public static void main(String args[]) {

        Triangle t1 = new Triangle();
        t1.base = 10;
        t1.height = 5;

        Triangle t2 = new Triangle();
        t2.base = 20;
        t2.height = 7;

        System.out.println("T1 area :  " + t1.getArea());
        System.out.println("T2 area :  " + t2.getArea());

    }

}
```
